Download

Chrome

iOS

Android

Install MetaMask for your browser

Then you be offered the choice of Browser, ISO or Android, select the appropriate one and proceed.

Once downloaded click the 'Get started' button. You will then be offered the choice of 'Import Wallet' or 'Create a Wallet'. For first time users select create a wallet. After agreeing to a short disclaimer, you will be prompted to create a password. Do not create a digital copy of this password for your own protection, write it down and store it safely. You will be required to enter this password every time you wish to access your MetaMask account.

Secret Recovery Phrase

MetaMask will then explain what a secret recovery phrase is, how to copy it and will provide information on why not to share this phrase with anyone.

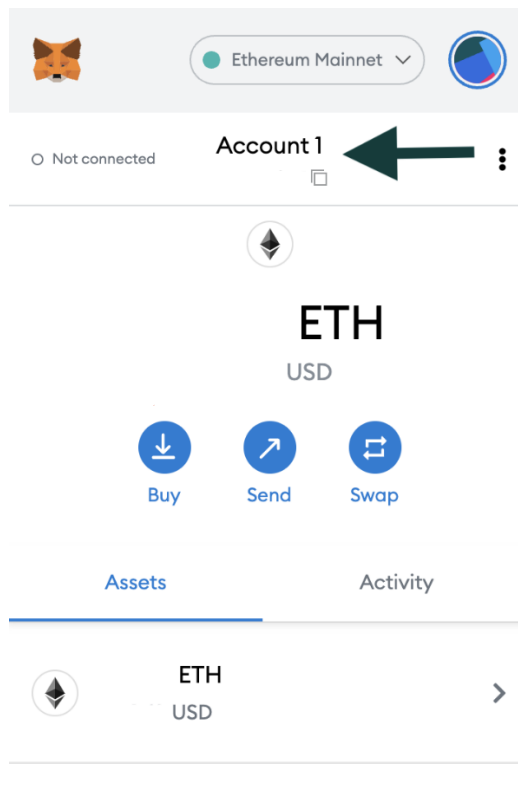

The secret recovery phrase will contain 12 random words in a specific order. If you ever lost your device or wish to add the account to another device the secret phrase is required.

It is very important that you write the secret phrase down and store it safely and never share it.

After giving you the 12-word secret phrase MetaMask will ask that you enter them before proceeding.

MetaMask Wallet

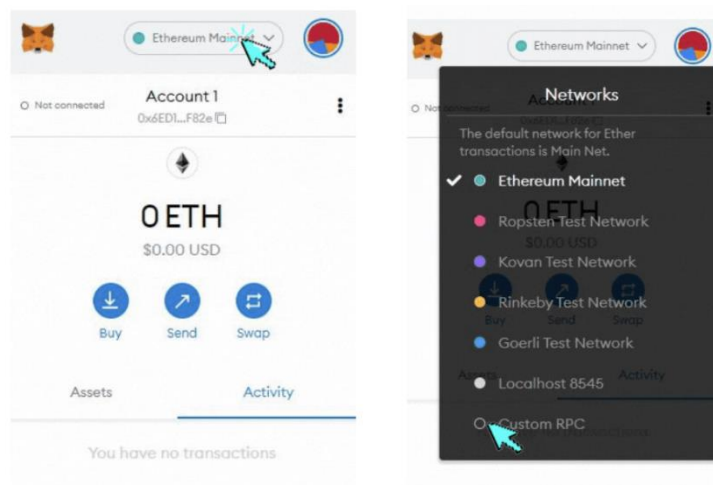

You can locate your unique MetaMask public address by clicking the "Account 1" button (black arrow). If you hover the mouse over 'Account 1' it will offer you 'copy to clipboard' which once copied can be paste and shared.

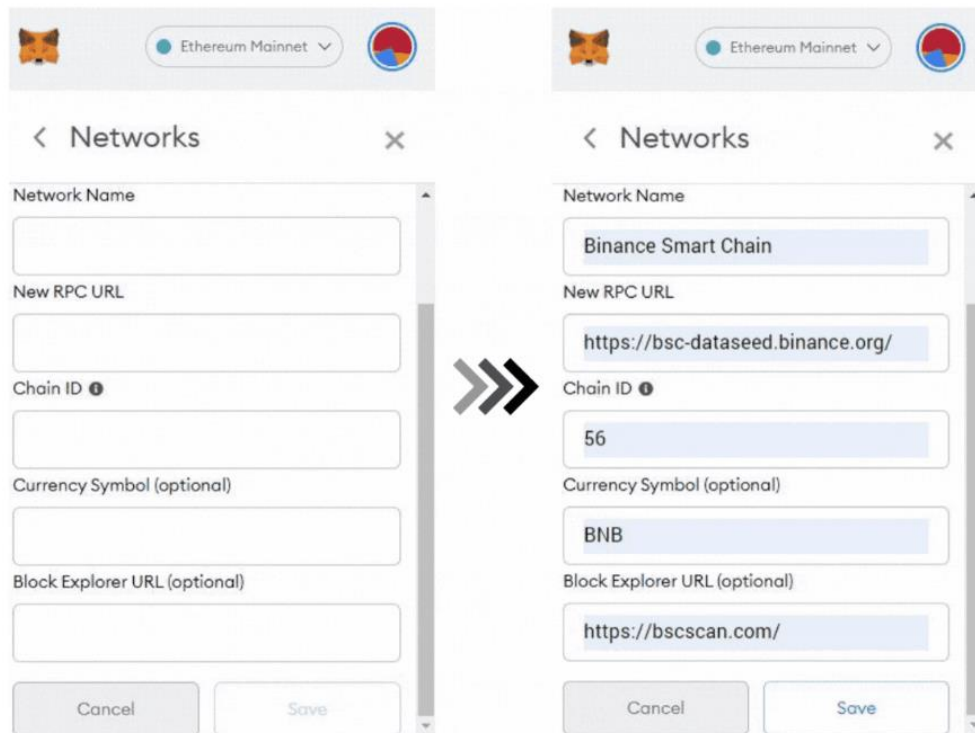

By clicking the 3 dots behind the black arrow you can expand view and MetaMask will occupy a tab.

Adding Binance Smart Chain (BSC)

To add BSC to MetaMask click on button at the top of the page which should state 'Ethereum Mainnet' then scroll down and select 'Custom RPC'

By clicking custom RPC you will need to enter the BSC details.

In Network Name: Smart Chain

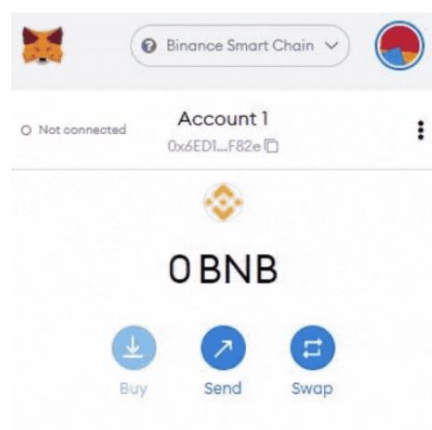

In New RPC URL: <https://bsc-dataseed.binance.org/>

In Chain ID: 56

In Currency Symbol: BNB

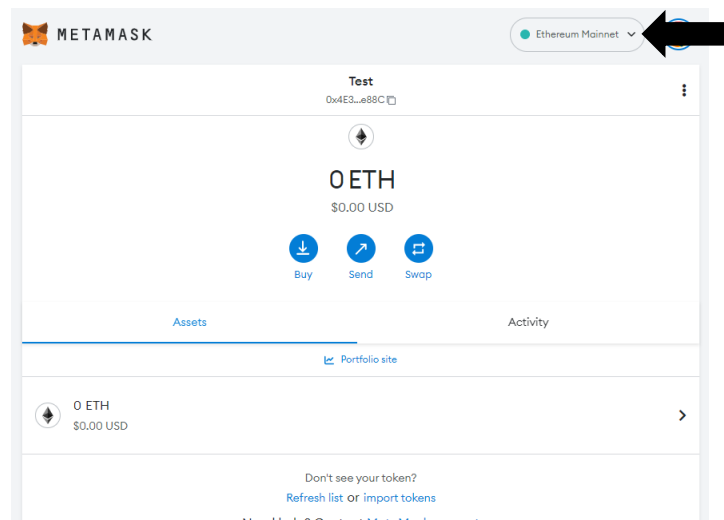

In Block Explorer URL: <https://bscscan.com/>

Then hit Save

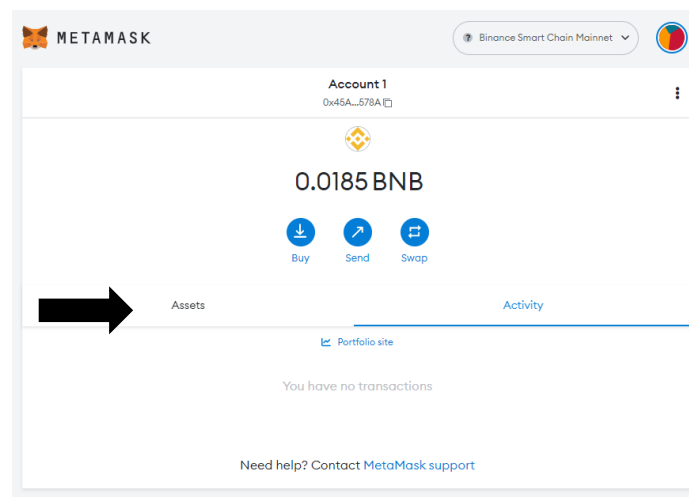

BSC network has now been added and your address is found within the 'Account 1' button where you can copy to clipboard and share.

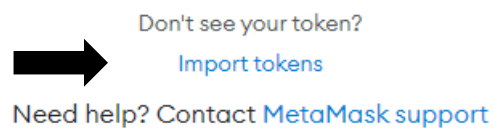

Adding LAG & LAR tokens

To add the custom tokens the network first needs switching to BSC, this is done by clicking the button indicated by the arrow and selecting Binance Smart Chain Mainnet.

You then need to select Assets as indicated by the arrow.

Proceed by selecting the import tokens link.

Import tokens

Custom token

Make sure you trust a token before you import it. Learn how to avoid token scams and security risks. You can also enable token detection in your Settings.

Token contract address

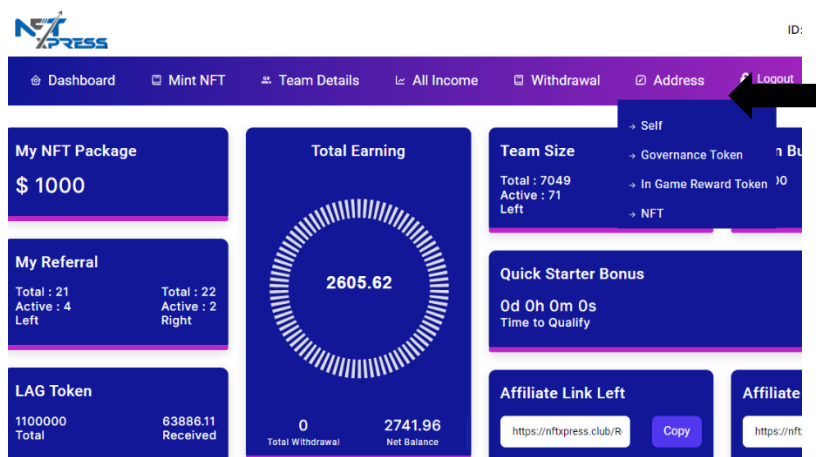

Token symbol

Token decimal

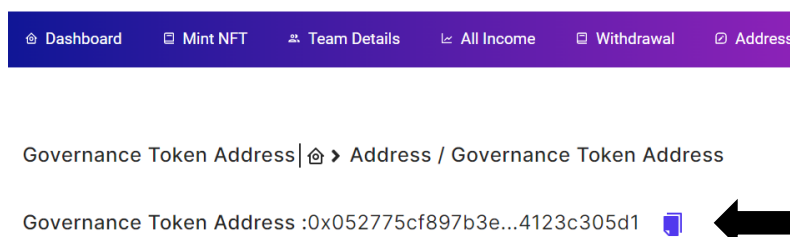

0

Add custom token

The next step involves the inputting of the address for the token being imported, to do this requires entering <https://nftxpress.club> and logging in to your account.

From the home screen of NFTX you can select Address button and you will be presented with four options, to add LAG & LAR you will need to select the governance token and the gaming token.

Next to the governance address is a copy to clipboard tab which allows for you to copy and return to MetaMask and paste into token contract address.

Import tokens

Custom token

Make sure you trust a token before you import it. Learn how to avoid [token scams and security risks](#). You can also enable token detection [in your Settings](#).

Token contract address

0x052775cf897b3ec894f26b8d801c514123c

Token symbol

Import tokens

The added token will now appear within the assets tab, if the token is not displayed then the setting for 'hide tokens without balance' may be on. When on any tokens with a zero balance are hidden. To access this, select the circle in the top right of the screen and scroll down to 'settings' at the bottom of the settings page you can toggle between off and on for token without balance, turn this off and the token should appear within the assets on the homepage.

You can now copy and paste the address and send and receive tokens to this account.

You can follow the same steps to add the gaming token by selecting the 'In Game Reward Token Address' from the Address tab in NFTXpress and inputting into the MetaMask Import tokens address.
